

ACVATIX™

PICV PN16/PN25 with flanged connections

PN16: VPF43../VPF44..

PN25: VPF53../VPF54..

VPF44../VPF54..

VPF43../VPF53..

Pressure Independent Control Valves (PICV)

- With integrated pressure differential controller
- Valve body made of gray cast iron GJL-250 (PN16) and nodular cast iron GJL-400 (PN25)
- Available in the range from DN50 to 200
- Volumetric flow 15 to 280 m³/h nominal, with presetting
- Equipped with pressure test points P/T
- Can be equipped with SAX..P., SAV..P. or SQV..P. electromotoric actuators

Use

- For use in heating, ventilation and air conditioning systems, district heating, as a control valve
- For closed circuits

Note:

DN = nominal size

H₁₀₀ = nominal stroke

V₁₀₀ = volumetric flow through fully open valve (H₁₀₀)

V_{min} = smallest pre-settable volumetric flow through fully open valve (H₁₀₀)

ΔP_{min} = minimum differential pressure required across the valve's control path, so that the differential pressure regulator works reliably

Ordering

PICV valve, actuator must be ordered separately.

When ordering please specify the quantity, product name and type code.

Example:

Product number	Stock number	Designation
VPF44.65F25	S55266-V176	PICV PN16 with flanged connections

Delivery

- PICVs, actuators and accessories are packed and supplied separately.
- The valves are supplied without counter-flanges and without flange gaskets.

A	Inlet port A
B	Outlet port B

Functional principle

The PICVs VPF43../VPF44../VPF53../VPF54.. combine three functions:

- a control valve for controlling the volumetric flow
- an adjustable mechanism with a dial for a pre-settable maximum volumetric flow
- a DPR for balancing pressure fluctuations in the hydraulic system respectively across the control valve

The mechanical series-connected differential pressure controller keeps the differential pressure ($p_1 - p_2$) constant across the control valve and thus the volumetric flow too. The desired maximum volumetric flow V_{100} can be preset with the adjusting mechanism. The controller (not shown) and the actuator regulate the volumetric flow and consequently the desired temperature in buildings, rooms or zones.

- A Inlet medium (inlet port A)
- B Outlet medium (outlet port B)
- 1 Ring with dial for presetting
- 2 Differential pressure controller (DPR)
- 3 Control valve with mounted actuator

- p_1 P/T port with red ribbon, pressure test point at inlet port A of PICV
- p_2 P/T port with blue ribbon, pressure at outlet port of control valve (3)
- p_3 P/T port with blue ribbon, pressure test point at outlet port B of PICV

Medium flow

The medium entering the PICV (inlet port A) first passes through the control valve (3) with a linear characteristic and a stroke of 20 mm (DN 50...80) respectively 40 mm (DN 100...150) and 43mm (DN 200). The actuator (not shown here) opens or closes accurately the control valve. Then, the medium flows through the variable presetting opening which is connected to the ring with dial (1) for presetting the desired maximum volumetric flow V_{100} .

Before leaving the PICV (outlet port B), the medium passes through a built-in mechanical differential pressure controller. This differential pressure controller is the heart of the PICV and ensures that the selected volumetric flow is maintained across the whole working range and independent of the inlet pressure p_1 .

Pressure test points

The PICV VPF43../VPF53.. are equipped with two pressure test points (p_1 , p_3) for measuring and monitoring the differential pressure across the valve during commissioning or operation. The PICV VPF44../VPF54.. are equipped with three pressure test points (p_1 , p_3 , p_2) for measuring and monitoring the differential pressure across the control valve and PICV during commissioning or for analysis during operation. For that purpose, the electronic manometer ALE10 can be used.

Manual control

Only possible with mounted actuator.

Advantages

The advantages of PICVs are that:

- Once the flow limiter (presetting) is set to the desired nominal flow, the hydraulic circuit is self-balanced, even when changes to the system are made, such as additions.
- For any heat or cold demand the PICV with mounted actuator can be set to the desired volumetric flow and will be relatively constant regardless of pressure fluctuations in the system.

Constant flow regardless of pressure changes in the system reduces hydraulic interdependence between hydraulic groups and leads to a more stable control.

Sizing

Engineering Example

$$\dot{V} = \frac{Q[\text{kW}] \cdot 1000}{1.163 \cdot \Delta T[\text{K}]} \left[\frac{\text{l}}{\text{h}} \right]$$

Basis of design

1. Determine heat/cold demand Q [kW]
2. Determine temperature spread ΔT [K]
3. Calculate volumetric flow
4. Select suitable PICV VPF43../VPF44../VPF53../VPF54..
5. Determine dial setting using volumetric flow/dial presetting tables, see below.

Example

1. Heat demand $Q = 150$ kW
2. Temperature spread $\Delta T = 6$ K
3. Volumetric flow

$$\dot{V} = \frac{150 \text{ kW} \cdot 1000}{1.163 \cdot 6 \text{ K}} = 21654 \text{ l/h} = 21.6 \text{ m}^3/\text{h}$$

Hint: You can also determine the volumetric flow using the valve slide rule.

4. PN class: PN16
5. Select PICV VPF44., PN16
Ideally, PICVs should be selected such that they operate at about 80 % of their maximum flow, enabling them to deliver spare capacity, if required.
Selections:
VPF44.65F25 $\Delta p_{\min} = 25$ kPa
VPF44.65F35 $\Delta p_{\min} = 40.5$ kPa
6. Determine dial setting using volumetric flow/dial presetting tables:
VPF44.65F25 Volumetric flow 21.6 m^3/h

Dial setting 3.7
 VPF44.65F35 Volumetric flow 21.6 m³/h
 Dial setting 2.5

Volumetric flow/dial presetting

Tables to determine the dial setting for a desired volumetric flow.

Δp_{min} [kPa] based on volumetric flow; interpolate missing values.

Presetting range linear to VDI/VDE 2173
Presetting range not permitted

Notes

Security

	<p>⚠ CAUTION</p>
	<p>National safety regulations</p> <p>Failure to comply with national safety regulations may result in personal injury and property damage.</p> <ul style="list-style-type: none"> Observe national provisions and comply with the appropriate safety regulations.

Engineering

Valve	Symbols / Direction of flow VPF44..	Flow in control mode	Valve stem	
			retracts	extends
PICV	  4315Z05	variable	Valve closes	Valve opens

	<p>⚠ WARNING</p>
	<p>The direction of flow indicated (arrow on the valve body) is mandatory!</p> <ul style="list-style-type: none"> The valves should preferably be mounted in the return pipe where temperatures are lower (for heating circuits), and where the sealing gland is less affected by strain. Valve's factory default position (without actuator) = CLOSED.

Symbol

Symbol used in catalogs and application descriptions	Symbol used in diagrams
	There are no standard symbols for PICVs in diagrams

Recommendation

- A strainer or dirt trap should be fitted upstream of the valve to enhance reliability and service life.
- Remove dirt, welding beads etc. from valves and pipes.
- Do not insulate the actuator bracket, as air circulation must be ensured!
- If flow measurement section is used (VPF44../VPF54.. only), make sure the flow measuring device is installed in a low turbulence area. In general, use the $5 \times \text{DN} / 10 \times \text{DN}$ rule, whenever possible and maintain a 10D distance from the pump.

Mounting

- PICV and actuator can easily be assembled on site. Neither special tools nor adjustments, besides flow rate presetting are required.
- The valve is supplied with Mounting Instructions A6V11464512.

Orientation

Direction flow

Pay attention to the valve's flow direction symbol during mounting.

Installation

Presetting

It is recommended to mount the actuator before the presetting is made.

1. Mount actuator and fix valve neck coupling
2. Mount valve stem coupling and tighten slightly
3. Make presetting according to table under "Volumetric flow / dia presetting". Do **NOT** adjust presetting to a dial reading lower than "0.6".
4. Tighten stem coupling

VPF43../VPF53.. ( 8 mm, \dot{V} [m³/h])

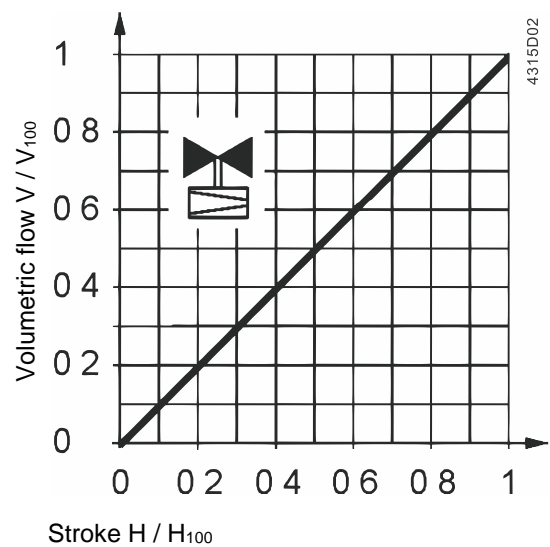

VPF44.../VPF54.. ( 8 mm, \dot{V} [m³/h])

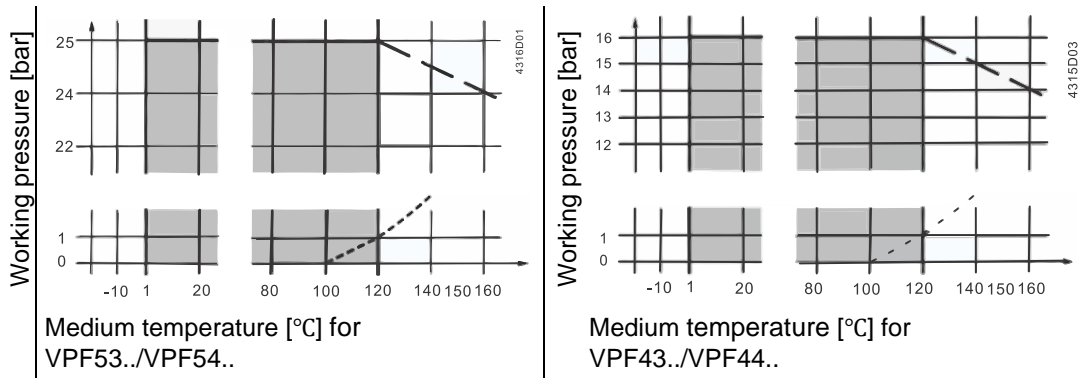

VPF44../VPF54.. has a symmetric pre-setting scale for easy commissioning. Identical pre-settings positions give identical flow rate.

Valve characteristic

Working pressure and medium temperature

Working pressure and medium temperature staged as per ISO 7005.

	⚠ WARNING
	Current local legislation must be observed.

Commissioning

!	NOTICE
	<ul style="list-style-type: none"> • Consequences The valves must be commissioned with the actuator correctly fitted. Strong pressure impacts can damage closed PICVs. • The valves must be open when flushing or pressure testing the system. Strong pressure impacts can damage closed PICVs. • Differential pressure P_{max} across the valve's control path is not allowed to exceed 600 kPa. • Valve's factory default position (without actuator) = CLOSED.

Maintenance

All VPF... PICVs are maintenance-free. Maintenance for VPF44../VPF54.. allows easy exchange of the differential pressure controller (DPR).

	⚠ WARNING
	<p>When performing service work on the valve or actuator:</p> <ul style="list-style-type: none"> • Switch off the pump and disconnect power supply. • Close the shut-off valves in the piping network. • Fully reduce pressure in the piping network and allow the pipes to cool down completely. • Remove the electrical connections only if necessary.

Sealing gland

The stem sealing gland cannot be exchanged. In case of leakage the whole valve must be replaced.

Disposal

The valve is considered an electronic device for disposal in accordance with the European Guidelines and may not be disposed of as domestic garbage.

- Dispose of the valve through channels provided for this purpose.
- Comply with all local and currently applicable laws and regulations.

Warranty

Technical data on specific applications are valid only together with Siemens products listed under "Equipment combinations". Siemens rejects any and all warranties in the event that third-party products are used.

Technical data

Functional data			
PN class	PN16 / PN25 as per EN 1333		
Permissible operating pressure	1600 kPa (16 bar) / 2500kPa (25 bar) as per ISO 7628 / EN 1333		
Valve characteristic	Linear as per VDI / VDE 2173		
Leakage rate	Class IV (0...0.01 % of volumetric flow V_{100}) to EN 1349		
Operating direction	Normally open (push to close/pull to open)		
Permissible media	Low temperature hot water, medium temperature hot water, chilled water, water with anti-freeze Recommendation: water treatment to VDI 2035		
Medium temperature	PN16	DN 50...150: 1...120 °C DN 200: 1...110 °C	
	PN25	DN 50...125: 1...120 °C DN 150, 200: 1...110 °C	
Rangeability	1: 100		
Average flow accuracy	± 10 %	from ΔP_{min} up to 70 kPa from ΔP_{min} up to 105 kPa from ΔP_{min} up 600 kPa	(DN 50...80) (DN 100...150) (DN 200)
	± 5 %	from 70...600 kPa from 105...600 kPa	(DN 50...80) (DN 100...150)
Nominal stroke	DN 50, 65, 80: 20 mm DN 100, 125: 40 mm DN 150, 200: 43 mm		
Low-noise operation	To operate the valve at a low noise level, a differential pressure of 150 kPa should not be exceeded.		

*tested in clean water conditions, represents the maximum deviation from the average measured flow

Materials	
Valve body	DN 50...80, DN125 (PN16): Gray cast iron GJL-250 DN 50...80, DN100, 150, 200 (PN25): Nodular cast iron GJS-400-15
Stem, spring	Stainless steel
Trim	Brass (DZR)
Regulator	Stainless steel
Seals	EPDM

1). Valves where $PS \times DN < 1000$, do not require special testing and cannot carry the CE label.

2).The documents can be downloaded from <http://siemens.com/bt/download>.

3). Warm water temperature not greater than 110°C, do not require special testing and cannot carry the CE label.

General ambient conditions

Temperature	1...55 °C	-30...65 °C	-15...50 °C
Humidity	5...95 % r. h.	< 95 % r. h.	5...95 % r. h.

Dimensions/weight

Dimensions	Refer to Dimensions [on page 18]		
Weight	Refer to Dimensions [on page 18]		
Flange connections	ISO 7005-2		
Pressure test points (P / T points)	G ¼ inch (connection) 2 mm x 40 mm (measuring tips)		

Application examples

PICVs in HVAC systems combined with variable speed pumps provide even higher energy efficiency. When sizing the pump, it must be made certain that the most critical branch or consumer in the system – usually the remotest from the pump – gets enough pressure (pump head). Thus, it is recommended to use a variable speed pump in constant-pressure mode with end-point feedback, to maintain a minimum differential pressure across the critical valve.

Residential buildings

Residential buildings with for example self-contained flat heating systems:

A6V11466366Z02

E = Floor
G = Group or zone
Non-residential buildings
Commercial buildings with for example Fan Coil Units or heat exchangers for heating or cooling
